

NEW!

**THIS TIME, SPECIFY
THE ALL-WELDED,
ONE PIECE JOHNSON®
SCREEN THAT WILL
MAKE YOU MONEY.**

- **Lasts Far Longer.** Johnson screen's heavier construction is many times more abrasion resistant than thin, perforated sheet. Its strength makes it less susceptible to damage during start-up. This will eliminate the rise in massecuite as your etched screen wears out.
- **Retains More Sugar.** Our continuous, long screen slots produce less crystal degradation. As a result, Johnson screens help you produce more sugar per ton than other centrifuge screens.
- **Installs Much Easier.** Our Johnson® centrifuge basket* is **one-piece**. No need for cutting. No splicing. No additional support structures. No headaches. Installation is fast and easy.

- **Resists Blinding Better.** Johnson continuous slot screen design is far more resistant to blinding than etched screens. Slots also can be varied by as little as 25 microns to meet any sizing need you may have.

All these add up to the big benefit: a lower cost per ton for your processed sugar. Call 651.638.3123, email giampolokj@usfilter.com or contact us through our web site at www.johnsonscreens.com. Supply us with your dryer model and slot opening and we'll give you a quote on the best available screen for your centrifuge.

*patent pending

YES, TELL ME MORE ABOUT CENTRIFUGE BASKETS.

- Please have a sales representative call me immediately.
- Please contact me. I'll be addressing centrifuge screen issues within the next six months.
- No plans yet, but I'd like some more general information.
